## Press Release

### **GOLDBECK and Mortenson Establish Joint Venture for Serial, Systemized Construction in the US Market**

The construction and services company GOLDBECK and Minneapolis-based US contractor M.A. Mortenson Company have established a joint venture to advance serial and systemized construction (industrialized construction) in the US market from 2027 onwards.

*Bielefeld, Minneapolis.* GOLDBECK is entering the US market following an in-depth market analysis. The joint venture draws on the expertise of more than 24,000 employees across both companies. Customers will benefit from the combination of GOLDBECK's know-how in serial, systemized construction and Mortenson's market knowledge, national scale and project delivery.

**Building and Growing with a Systemized Approach in the USA**

“Our experience in serial, systemized construction gives us a clear competitive advantage. In this form, our business model is unique in the United States,” says Jan-Hendrik Goldbeck, Co-CEO of GOLDBECK. Through its systemized approach to construction, the company consistently applies industrial principles to the building sector. GOLDBECK’s scalable method is based on a proven construction system that combines pre-engineered systemized solutions, digital planning and control processes, and an integrated value chain. Design, procurement, construction and operation work seamlessly together, enabling buildings to be delivered quickly, cost-effectively and to a high standard of quality. “The US market offers enormous potential for our logic of construction. Together with Mortenson, we want to establish the strengths of systemized construction in the United States and continue driving our growth,” adds Jan-Hendrik Goldbeck.

## **Silicon Valley Network Supports International Expansion**

Since its founding in 1954, Mortenson has delivered numerous high-profile and innovative construction projects across the United States, including the Walt Disney Concert Hall in Los Angeles and the Allegiant Stadium, home of the Las Vegas Raiders. The company is one of the largest privately held construction firms in the country.

The connection between the two companies originated through GOLDBECK’s presence in Silicon Valley since 2019 and its involvement in the innovation network of Stanford University’s CIFE Institute, one of the leading centers of expertise for industrialized construction in the United States.

“It is remarkable when two highly capable and different companies combine their strengths to create something new and exceptional in the large US market, leveraging AI and automation as the foundation,” says Jan-Hendrik Goldbeck.

## **Shared Values as the Foundation for Economic Success**

Alongside their economic ambitions, both companies share a common set of values. "As family-owned businesses, we are united by values such as a pioneering spirit, innovation, trust and humanity. They provide the ideal foundation for creating future-ready buildings for people across the United States," says Derek Cunz, President and CEO of Mortenson.

## **About Goldbeck**

Goldbeck builds future-oriented buildings. The company regards buildings as products, which it delivers efficiently by serving as a one-stop shop: from design and construction to services during operation. In line with the aspiration "Building Excellence", the family-owned company carries out real estate projects fast, sustainably and cost-effectively, with a perfectly fitting functionality.

Goldbeck is a partner for medium-sized and large companies, investors, project developers and public-sector clients. Our range of services includes warehouses and factories, multi-storey car parks, office and school buildings, sports halls, rescue- and safety buildings as well as residential buildings. In addition, Goldbeck is active in the field of data center construction. Existing building refurbishment and expansion of existing buildings, as well as building-related services complete the Goldbeck spectrum. In the financial year 2024/25, Goldbeck completed around 600 projects with a total output of 6.3 billion euros. Currently, the company employs around 14,000 people at more than 100 locations across Europe.
