

DevOps or SRE Engineer (m/w/d) for Smart Building

Ort: Bielefeld, Köln (Zentrum)

Job-ID: 10692

Your tasks

- // Solve technical and conceptual challenges and contribute to the continuous improvement of methods and tools within one of our cross-functional Scrum teams
- // Shape and operate the build and runtime environment of our cloud platform
- // Support software development teams with implementing robust and efficient continuous delivery processes and application security
- // Monitor and assess CVEs and other threats to our platform
- // Significant creative freedom in performing the mentioned tasks

Your individual profile

- // Completed IT studies or IT training with several years of experience in the development or operation of software solutions using Terraform in Azure or similar
- // Experience with Git-based continuous delivery or GitOps
- // Solid understanding of cloud and supply chain security
- // Extensive experience in container operations with Kubernetes and Helm with a focus on security, elasticity and availability
- // Knowledge of web/app security and distributed authentication protocols like OAuth 2.0/OIDC
- // Strong analytical and communication skills, as well as team spirit
- // Excellent English skills, both written and spoken

Über GOLDBECK

GOLDBECK realizes pioneering real estate projects in Europe. We perceive buildings as products and offer all services from a single source: from design to construction to services and operating the buildings. Currently, our family-owned company employs more than 13,000 people at over 100 locations, with a total volume of over 6.3 billion euros. Our claim "building excellence" stands for top performance in planning, construction, and operation, as well as the development of our talents - including future viability.

Through more advanced building technology, combined with sensors and automation systems, new opportunities and challenges arise around real estate. While new digital applications for various target groups can be realized on the one hand, a highly efficient, digitally supported building operation must take place on the other. GOLDBECK addresses these topics related to the collection, storage, evaluation of building data, and software development with its new development area Smart Building.

Klingt interessant?

Then please complete your application online and address to Mr. Mandel.
